Computational cum Semantic Search Engine

Just another search engine?

Semantic Search?

Computational cum Semantic Search Engine

Just another search engine?

Semantic Search?

1. Well! what is this Semantic Search and how is it different from current search engines?

Computational cum Semantic Search Engine

Just another search engine?

Semantic Search?

1. Well! what is this Semantic Search and how is it different from current search engines?
2. what current search engines can't answer?

Computational cum Semantic Search Engine

Just another search engine?

Semantic Search?

1. Well! what is this Semantic Search and how is it different from current search engines?
2. what current search engines can't answer?
3. How can it be useful?

Computational cum Semantic Search Engine

Just another search engine?

Semantic Search?

1. Well! what is this Semantic Search and how is it different from current search engines?
2. what current search engines can't answer?
3. How can it be useful?
4. Any existing semantic search engine?

Computational cum Semantic Search Engine

Just another search engine?

Semantic Search?

1. Well! what is this Semantic Search and how is it different from current search engines?
2. what current search engines can't answer?
3. How can it be useful?
4. Any existing semantic search engine?
5. What is computational engine?

Computational cum Semantic Search Engine

Just another search engine?

Semantic Search?

1. Well! what is this Semantic Search and how is it different from current search engines?
2. what current search engines can't answer?
3. How can it be useful?
4. Any existing semantic search engine?
5. What is computational engine?

Before diving into answers, we first need to understand the limitations of present search engines.

Present search engines can be better

Present search engines can be better

- google search results can be more specific.

Present search engines can be better

- google search results can be more specific.
- google or even wikipedia don't give us answer.

Present search engines can be better

- google search results can be more specific.
- google or even wikipedia don't give us answer.

Present search engines can be better

- google search results can be more specific.
- google or even wikipedia don't give us answer.
- sometimes, computational engines can be more useful

Present search engines can be better

- google search results can be more specific.
- google or even wikipedia don't give us answer.
- sometimes, computational engines can be more useful

Present search engines can be better

- google search results can be more specific.
- google or even wikipedia don't give us answer.
- sometimes, computational engines can be more useful
- Facebook's graph search can't deduce relations using given set of rules.

Features of SKI

It enjoys features of both worlds

1. Directly give answers to the questions.

Features of SKI

It enjoys features of both worlds

1. Directly give answers to the questions.
2. Produce User specific search results.

Features of SKI

It enjoys features of both worlds

1. Directly give answers to the questions.
2. Produce User specific search results.
3. Can solve complex mathematical problems.

Features of SKI

It enjoys features of both worlds

1. Directly give answers to the questions.
2. Produce User specific search results.
3. Can solve complex mathematical problems.
4. Can decuce relations from given set of rules.

Features of SKI

Example

- Question: Can Pypi give birth to new offspring?

Features of SKI

Example

- Question: Can Pypi give birth to new offspring?
- Rules:
- Pypi is a cat.
- Cats are mammals.
- Mammals can give birth to new offspring.

Features of SKI

Example

- Question: Can Pypi give birth to new offspring?
- Rules:
- Pypi is a cat.
- Cats are mammals.
- Mammals can give birth to new offspring.
- Answer: Yes, Pypi can give birth to a new offspring.
